

**PAPER**

## Your comprehensive source for academic support: Paper's Educational Support System

Students' preparation for the future starts from the very first day they enter your classrooms.

Paper's new Educational Support System (ESS) is an adaptive learning platform that supports students on this learning and discovery journey across grades and subjects. We help students master skills, complete assignments, and make connections between areas of study and future careers—as well as support them as they create and adjust their academic plans for postsecondary success.

Woven into the ESS is our Learner Profile, which understands students' goals, interests, and strengths. At the same time, our Teacher Dashboard gives educators the information they need to personalize learning and support students both online and off.

Our trusted learning platform is available whenever students need practice, help, and guidance so they can experience confidence and success throughout their academic journey and beyond.

# Supporting students through their academic journeys—and beyond

We designed Paper's ESS to meet each student where they are with their own knowledge and skills across classes, courses, and grade levels.

## Meet Stephanie

### Academic support

Stephanie can get help in any class 24/7 via tutors who walk her through concepts, assist with homework, and offer feedback on written assignments. These tutors can also support students in English, Spanish, French, and Mandarin.

### Career and college readiness

As Stephanie progresses through middle and high school, she can use Paper to explore various careers, secure Micro-credentials, research colleges and universities, and so much more.

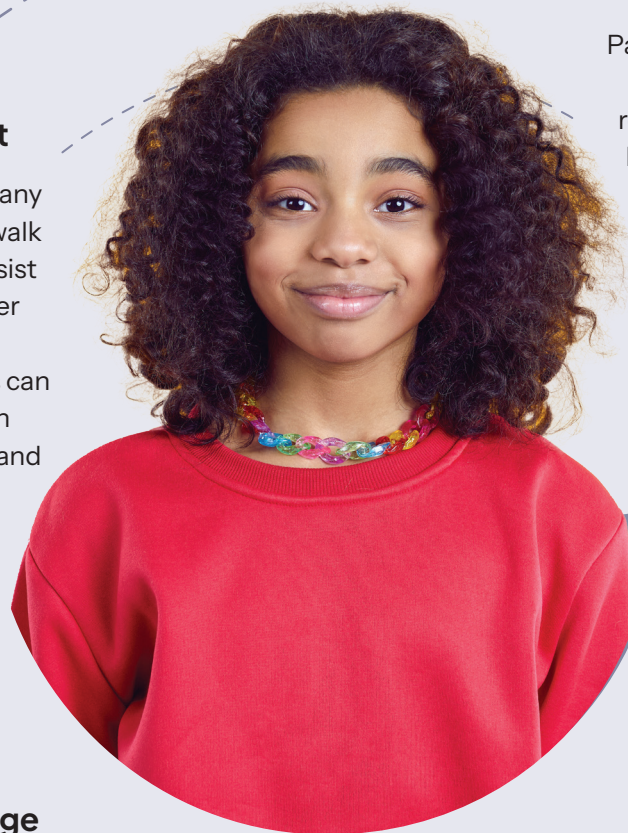

### Independent practice

Stephanie can also use Paper to practice essential math, vocabulary, and reading skills. This builds her confidence in a way that's engaging, interactive, and fun.

### Learner profile

When Stephanie first logs into Paper™, she will complete a Learner Profile that collects information on her interests, learning preferences, and comfort levels across core subject areas. As she continues to use Paper, we'll gather data about her activities to help personalize her learning experience.
